

From leaf to pitcher:

How have *Nepenthes* gone from having normal leaves to leaves with pitchers? Try "evolving" a leaf for yourself by cutting out the whole leaf **1**, then transforming it into a pitcher **2**. What side of the leaf is on the inside of the pitcher? Try colouring this side (top) green.

5 Bend other side around, slotting in tabs. All numbers are inside.

4 Start bending edges towards you around the contour of the oval, taping the near tab where it meets.

3 Fold both sides of peristome forward, then over themselves and underneath while flat.
